Run Generate Table key. Click "Find". Type in a name for the generated table. You can then share this with others in your world. I have this, table { background: #E0D1D4; margin: 0 auto; width: 95%; } tr { display: flex; height: 50px; flex-direction: row; flex-wrap: wrap; } td { padding: 10px; } th { background: #E0D1D4; border: 2px solid #F0B74E; font-weight: bold; height: 50px; line-height: 50px; text-align: center; width: 100%; } Header1 Header2 Cell1 Cell2 as you can see, I have flexed the table, but this made it a square and it needs to be a rectangle, so how can I get the height of the table and make sure it fit the size of the size available to the table. What's New in the?

Hints and (sometimes) tips from a designer's assistant: "Markup Assist can automatically add markings such as window and door openings, framing and other visual elements, to your drawings." Built-in Styles for Review and Editing: AutoCAD 2D and AutoCAD 3D users can use styles in a new way. Create a style with the text and dimensions you need. Apply this style and keep it open for comparison, editing and sharing. (video: 2:10 min.) SpotLight Showcase: New transparent shaded materials (AutoCAD 2D only) now have unique effects that can be added to other transparent shaded surfaces, including complex surfaces like those in a photo-realistic 3D scene. The new SpotLight Showcase feature uses an image as a background that is set to be transparent. You can use this transparent background to create a shadow behind a sheet, and get amazing visual effects. The new feature takes advantage of the unique properties of a Windows 10 Anniversary Update (2016) and “universal Windows apps” – the power of the OS that runs on a phone, tablet, and PC. The user interface for the feature has been streamlined and simplified, making it easier to use. For example, there is now only one way to pick a SpotLight. (Instead of clicking on the background and picking a SpotLight from the menu, you can use the "Sp" shortcut key to pick a SpotLight from anywhere on the desktop or a selected Drawing window.) Drawing Backed by Technology Making 3D more accessible: 3D now has a new user experience that is designed to be less intimidating and more accessible. (video: 1:40 min.) You can now work with 3D drawings even if you don’t have a 3D-capable system. AutoCAD 2D and AutoCAD 3D 2010 and newer have technology that makes it possible to edit 3D drawings directly on your computer. It’s no longer necessary to wait for the hard copy to come back from the 3D printer. Other changes in 3D: The simplified layer management options make it easier to keep track of how 3D layers relate to each other. AutoCAD 2015 was the first release to use the real-time, collaborative DraftSight feature, which lets users see and edit drawings in real time. In AutoCAD 2
