As a preliminary step towards developing a home-based health care service for the elderly, an economic model is proposed in which costs are divided into personnel and technical. In this model, the probability of utilising services is taken to be related to the total cost of the programme. The model is illustrated by application to a hypothetical scenario where four homecare teams, including a nurse, are utilised for the care of three groups of clients: clients in need of regular visits to their general practitioner, clients in need of care provided at home by the nurses, and clients in need of nursing and care from a group of homecare nurses. The expected outcome of the nurses and their patients, and the expenditure on care, are calculated for the first year and for ten years.A Zimbabwean tourist has been attacked and bitten by a lion cub at the Hwange National Park in Zimbabwe. Use documentation symbols, such as arrows, brackets, or circles, to symbolize complex drawing elements like joints, mechanical connections, or bearings. Use these symbols to capture the thought process and solution flow in your CAD drawings. (video: 1:15 min.) The new Markup tool includes two new commands: Follow arrow-shaped annotations, used to depict shaft and support shafts, bosses, T-slots, and bearing areas. The New Profile 2 symbol includes an arrow, making it useful for precisely marking areas along a member as bearing sites. Show coordinate system and parallel ruler in status bar. You can now use an external spline model (Weknet) to convert an arc to a spline and find its center. Create dynamic views for parts of a drawing with the Dynamic Part view. Use 3D views and 3D models to edit them and apply them as parts. Use the Dynamic Snap view for converting lines to dynamic actions, easily converting a single line segment to a dynamic action. Use new features in the Dynamic Actions toolbox to easily convert lines to dynamic actions. Enhancements to the Lines toolbox: Make it easier to select the top and bottom edges of a box or line segment. You can also select two separate line segments to connect the two sides. (video: 1:43 min.) Change the vertical offset of the selected line segments. Delete multiple line segments with a single keystroke. (video: 2:14 min.) Select line segments based on handles.
