File format The DWG and DWF file format is intended to be used for archiving design information that is shared between applications, but is not necessarily a self-describing file format. Since the DWG file is itself not self-describing, AutoCAD's drawing file format also cannot be used as a portable application file format for general file sharing. The structure of a DWG file does, however, map closely to the Exchange File format. A number of competing file formats have been developed to support the exchange of AutoCAD drawings. The original Exchange format was the DWG format developed by Autodesk and NuCore in the 1990s. The latest version is Exch format with version 5.0. Another format is the PTC format, which was originally named the "PTC data interchange format." Its format is very similar to the popular EPS format. DWG and DXF The DWG file format allows the AutoCAD program to operate on the files stored in its own proprietary file format. The DWG file format is tightly integrated with AutoCAD. The AutoCAD 2000 and later versions of AutoCAD have a second proprietary file format called "Exchange Drawing Format" or "Exchange File Format". The DXF format is used for interoperability with other Autodesk programs, and for interchange with other programs that do not support the DWG format. DXF files contain the same information as DWG files, and are usually saved using the same software. With the advent of DWF, the DXF format has been retired. AutoCAD also supports the DGN and E00 formats, which are now considered obsolete. DWF The DWF file format is intended for interchange with other AutoCAD programs. DWF files are binary versions of DWG files, as opposed to DXF which are ASCII versions of the DWG format. The DWF format is much more compact and efficient, allowing files to be stored and transmitted without being converted to another file format. Therefore, it is the most widely used file format for sharing AutoCAD drawings. Project files AutoCAD supports two types of project files. A project file or Project Repository is a collection of related drawings, such as walls, plans, floor plans, furniture, structural and mechanical drawings, and may also include assemblies, schedules, gantries, schedules and reports. Project files are typically a1d647c40b
