Easy Time Tracking PRO Download With Full Crack is a comprehensive and user-friendly application that comes bundled with several useful tools to help you add, organize and handle information about multiple clients and employers, various

tasks, expenses and billing details. Swift and uncomplicated installation, along with an accessible interface. The setup is over before you realize and uneventful. In order for the program to start and run smoothly.NET Framework needs to be present on the computer. It's wrapped

in a well-organized and stylish layout, which might require some basic management skills to quickly get familiarized with the menu. The window is divided into neatly structured sections for each category (projects, time tracking, expenses, reports, user management, invoices,

payments) situated on the left side of the panel. The command panel can be easily moved to any location within the pane and includes quick controls for the most important functions. Insert and handle customers and assignments When the program is run for the first time, it offers a

simple wizard that guides you through a few essential steps to customize the time and viewing options. All the records of each client are displayed in a tree view for easier search and access. When you add a new customer, you have to input the company name, address, country, email, phone

number and optional notes. For each individual, you can enter as many projects and tasks as you want, which need to contain a title, status, start and end time, estimated hours, category and an optional description. If you wish to create an invoice for someone, you just have to specify the billed

company, date, discount, terms, along with the purchased items, quantity, unit cost and price. Track assignments and generate reports It's possible to view all daily and monthly tasks for each client, make custom summaries and display the history log that can contain expenses and approved

invoices. Plus, you can manage the all the users who have access to the database and add new ones. You can backup the database to a safe location on the hard drive, as well as export it to CVS format. I like it.
