----- zmmmmm "I kind of
liked the idea. I mean, I don't
know. I've never done a real
TV show before." Does that
sort of statement exist for
every show, even when they
don't get picked up? ~~~
blotter_paper I can imagine

the TV studio who makes the pilot, or at least the producers, knowing that they won't get picked up, so the pilot script is written that way, not as a "real" script, but as a "sort-of-real" script. The invention relates to a combined braking and mixing valve. A combined braking and mixing valve is described in German Patent Disclosure DE 198 25 391 A1. The mixing valve is designed as a four-way valve.

It serves for mixing a fluid with a temperature of 150° C. and for compensating a pressure loss of the fluid in the housing of a fuel distributor, a fuel dispenser or the like. The pressure loss of the fluid is compensated by supplying a feed of the fluid to the inlet or to the outlet. In the case of the mixing valve, the feed of the fluid can be generated by the supply pressure of the fluid. The supply pressure of the

fluid can be generated in various ways. One possibility is to provide the four-way valve as a four-way valve with a control valve. The control valve is designed as an electro-hydraulic valve. The control valve is actuated via the supply pressure of the fluid. The control valve has a pressure-resistant valve seat, through which pressure-resistant valve sealing surfaces of a valve slide engage. The valve slide has a

pair of sealing edges. The valve slide is supported on a valve slide support, which is supported on a shaft, and can be set in rotation relative to the housing. In a first operating position, the sealing edges are located in the axial dead centre position. In the second operating position, the sealing edges are located in the vicinity of the housing, in order to reduce the pressure loss. One problem of such a

known combined braking
and mixing valve is that the
fluid pressure, in particular
of the pressure of the
compressed air, is
transmitted via the valve

PDF.Q: Find out screen
resolution programmatically
in Java I need to get screen
resolution programmatically
and it is not through
WindowManager. I found a
tutorial on Java page and it is
just giving this: Display
display = getWindowManage
r().getDefaultDisplay(); It is
not clear what does getWind
owManager().getDefaultDisp

lay() means here. I need to get the resolution that is displayed on my monitor. Is there any other way to do it?
